Introduction

When entering into an agreement with a “cloud” service provider, every school/data controller has to be satisfied that the relevant service provider is carrying out its data processing as per their requirements (ensuring compliance with the Data Protection Act (DPA) by the data controller and also the data processor by default).

It is the responsibility of every school to ensure compliance with the DPA. This document is meant to act as an aid to that decision-making process by presenting some key questions and answers that should be sought from any potential cloud service provider.

The questions answered in sections 3 to 9 below will give a good indication as to the quality of a service provider’s data handling processes, although schools will still need to make their own judgement as to whether any provider fully meets DPA requirements.

The school/data controller should communicate its particular data handling requirements to the cloud provider (and each school could be different in its interpretation of what measures, procedures or policy best meet their DPA requirements), and confirm these by way of contract. The best way to set that out is to also put in place a data processing agreement with your chosen provider.

The principles of the DPA are summarised by the Information Commissioner’s Office at:

http://ico.org.uk/for_organisations/data_protection/the_guide/the_principles

1. Supplier commitments

In order that schools can be confident regarding the accuracy of the self-certification statements made in respect of the UniServity cloud service, the supplier confirms:

- that their self-certification responses have been fully and accurately completed by a person or persons who are competent in the relevant fields
- that their self-certification responses have been independently verified for completeness and accuracy by Dawn Mulholland who is a senior company official
- that they will update their self-certification responses promptly when changes to the service or its terms and conditions would result in their existing compliance statement no longer being accurate or complete
- that they will provide any additional information or clarification sought as part of the self-certification process
- that if at any time, the Department is of the view that any element or elements of a cloud service provider's self-certification responses require independent verification, they will agree to that independent verification, supply all necessary clarification requested, meet the associated verification costs, or withdraw their self-certification submission.

2. Using the Supplier Responses

When reviewing supplier responses and statements, schools will also wish to consider aspects of data security beyond the supplier-related issues raised in the questions. These include:

- how the school chooses to use the provided cloud service
- the nature, types and sensitivity of data the school chooses to place in the cloud service
- the extent to which the school adapts its own policies (such as acceptable use, homeworking, Bring Your Own Device (BYOD) and staff training to ensure that the way staff and students use the service is consistent with DPA guidance. Please refer to the Information Commissioner's Office (ICO) BYOD guidance: http://ico.org.uk/for_organisations/data_protection/topic_guides/online/byod
- the wider policies and practices the school has in place to ensure that the use of cloud services by their staff and students remains DPA compliant,
- the use of robust, strong, frequently changed authentication passwords and encryption keys, policies on BYOD / homeworking / acceptable use

to ensure that school data is accessed securely when either on or off the premises

- The security of the infrastructure that the school uses to access the supplier’s cloud service including network and endpoint security.

The purpose of this particular document is to focus upon some key areas that schools should consider when moving services to cloud providers. Although it is designed to cover the most important aspects of data security, the checklist should not be viewed as a comprehensive guide to the DPA.

The self-certification checklist consists of a range of questions each of which comprises three elements:

- the checklist question
- the checklist self-certification response colour
- the evidence the supplier will use to indicate the basis for their response

For ease of reference, the supplier responses have been categorised as follows:

Where a supplier is able to confirm that their service fully meets the issue identified in a specific checklist question (in a manner compliant with the obligations of the Data Protection Act where relevant), the appropriate self-certification colour for that question is GREEN .	
Where a supplier is not able to confirm that their service fully meets the issue identified in a specific checklist question (in a manner compliant with the obligations of the Data Protection Act where relevant), the appropriate self-certification colour for that question is AMBER . <i>(It should be made clear that a single “Amber” response is not necessarily a negative, and that any associated clarification should also be considered).</i>	
Where a supplier is able to confirm that a specific checklist question does not apply to their particular service the appropriate self-certification code for that question is BLACK .	

There is space provided within the supplier response for links to relevant further information and clarification links.

Schools are invited to use the checklist to support their assessment of the extent to which the cloud services from a particular supplier meet their educational, technical and commercial needs in a DPA-compliant manner.

Schools should make a decision on the selection of a supplier based on an overall assessment of the extent to which their product meets the needs of the school, the overall level of risk and the nature and extent of support available from the supplier.

3. Supplier Response - Overarching Legal Requirements

Schools are required to ensure that all cloud services used enable them to meet their legal obligations under the DPA. To assist schools in that assessment, UniServity Ltd confirms the position to be as follows:

Question	Supplier Response Code	Response Statement with Supporting Evidence (where applicable)
Q 3.1 – Does your standard contract for the supply of cloud services to UK schools fully comply with the DPA?		Yes our standard contract for the supply of cloud services to UK schools fully complies with the DPA.
Q 3.2 – If your standard contract does not fully comply with the DPA, do you offer additional commitments to UK schools to help ensure such compliance?		N/A
Q 3.3 – Is your contract with UK customers enforceable both in the UK and in the country in which your company is		Yes, we are a UK based company and our contract with our customers is governed by English law and subject to

registered?		the jurisdiction of the English courts.
Q 3.4 – Do your services ensure that schools are able to comply with their obligations with regard to the exercise of data subjects’ rights?		Yes, our products and administration tools allow users to have access to their own information enabling them to comply with their obligations regarding the exercise of data subjects’ rights.

4. Supplier Response - Data Processing Obligations

The Data Protection Act (DPA) relates to personal data that is processed and is likely to be relevant to most of the operations that comprise a cloud computing service. This includes simple storage of data, the obtaining and handling of information, operations such as adaptation, organisation, retrieval and disclosure of data, through to erasure or destruction.

Schools, as data controllers, have a responsibility to ensure that the processing of all personal data complies with the DPA and this includes any processing carried out on their behalf by a cloud service provider.

To assist schools in understanding whether the cloud service being provided by UniServity is likely to comply with the DPA in relation to data processing, UniServity has responded as follows:

Question	Supplier Response Code	Response Statement with Supporting Evidence (where applicable)
----------	------------------------	--

<p>Q 4.1 – Taking account of the UK Information Commissioner's Office (ICO) guidance on Data Controllers and Data Processors, when providing the service, do you act at any time as a data controller in respect of the data processed as part of this service?</p>		<p>No, UniServity does not act as the data controller at any time.</p>
<p>Q 4.2 – Where you act as a data processor does your contract ensure that you will only act on the instructions of the data controller?</p>		<p>Yes, UniServity only acts according to the instructions of the data controller, as per our contract with the customer.</p>
<p>Q. 4.3 – Does your contract document the security measures that you implement to enable a school to ensure compliance with the DPA's security obligations?</p>		<p>Yes, we offer an addendum to our standard contract which can be made available to schools upon request.</p>
<p>Q 4.4 – Is the processing of personal data or metadata limited to that necessary to deliver [or improve] the service?</p>		<p>Yes, UniServity only processes personal data or metadata in accordance with our contract with the customer, in order to deliver, maintain and improve the product.</p>

Q 4.5 – Where your contract does not cover every aspect of data processing, are you prepared to enter into a separate data-processing agreement with your cloud services customer?		Yes we would be happy to discuss any additional requirements with a customer on a case by case basis.

5. Supplier Response - Data Confidentiality

When choosing a cloud service provider, schools must select a data processor providing sufficient guarantees about the technical and organisational security measures governing the processing to be carried out, and must take reasonable steps to ensure compliance with those measures.

The cloud customer should therefore review the guarantees of confidentiality that the cloud provider can commit to. To assist in understanding if the service being provided by UniServity is likely to comply with UK law in relation to data confidentiality UniServity has responded as follows:

Question	Supplier Response Code	Response Statement with Supporting Evidence (where applicable)
----------	------------------------	--

<p>Q 5.1 – Do you prohibit personal data or metadata being shared across other services that you as a supplier do or may offer?</p>		<p>The sharing of any data across the platform is determined by individual users who have been nominated as ‘administrators’ of their schools site. UniServity does not share data.</p>
<p>Q 5.2 – Do you prohibit personal data or metadata being shared with third parties?</p>		<p>No personal data or metadata is shared with third parties.</p>
<p>Q 5.3 – Does your service have a robust authentication process in place to protect access to personal data and/or user accounts?</p>		<p>Yes, access to all of our products is via a unique login ID and password. Our applications run on a dedicated, secure SQL server environment with comprehensive firewall provision, data transfer and encryption using 2048 bit SSL over HTTPS and strong password policies.</p>
<p>Q 5.4 – Does your service have in place arrangements to assist schools in protecting access to personal data and/or user accounts?</p>		<p>All users are able to determine their own password strength and administrators can reset passwords or revoke access at any time.</p>
<p>Q 5.5 – Are appropriate controls in place to ensure only authorised staff have access to client/customer data?</p>		<p>Only authorised staff are able to access sensitive data. Data protection is considered from both physical and electronic aspects. All data is held on servers held in a</p>

locked area with 24-hour security access, manned desk, perimeter alarms, CCTV, 24 hour notice for visit (requires photo id) and restricted access to the servers. No UniServity staff can physically access the hosted service.

Questions 5.6 to 5.9 address the supplier approach to data encryption. The ICO guidance on encryption is as follows:

There have been a number of reports recently of laptop computers, containing personal information which have been stolen from vehicles, dwellings or left in inappropriate places without being protected adequately. The Information Commissioner has formed the view that in future, where such losses occur and where encryption software has not been used to protect the data, regulatory action may be pursued.

The ICO recommends that portable and mobile devices, including magnetic media, used to store and transmit personal information, the loss of which could cause damage or distress to individuals, should be protected using approved encryption software which is designed to guard against the compromise of information.

Personal information which is stored, transmitted or processed in information, communication and technical infrastructures, should also be managed and protected in accordance with the organization's security policy and using best practice methodologies such as using the International Standard 27001. Further information can be found at <https://www.getsafeonline.org/>

There are a number of different commercial options available to protect stored information on mobile and static devices and in transmission, such as across the internet.

<p>Q 5.6 – Does your cloud service insist that communications with access devices are encrypted?</p>		<p>All authentication processes are forced over SSL. All other activity within the cloud does not force the user to use SSL although this could be enabled in specific instances if required.</p>
<p>Q 5.7 – Does your cloud service ensure that data at rest is encrypted?</p>		<p>Sensitive data such as passwords is encrypted. Other data is not encrypted but is held in our partner’s secure data centre. None of the data is directly accessible from the internet and all the URLs are managed by the application security.</p>
<p>Q 5.8 – Does your cloud service ensure that data in transit between your data centres is encrypted?</p>		<p>N/A, we do not move data between data centres.</p>
<p>Q 5.9 – Does your cloud service ensure that email traffic between your cloud service and other cloud service providers can be encrypted?</p>		<p>N/A, our cloud service does not include email functionality.</p>
<p>Q 5.10 – Does your service provide defined timescales in respect of data destruction</p>		<p>Yes, once a customer contract ends, the customer has 7 days access to remove, delete or download their data, after which time UniServity is free to delete such data</p>

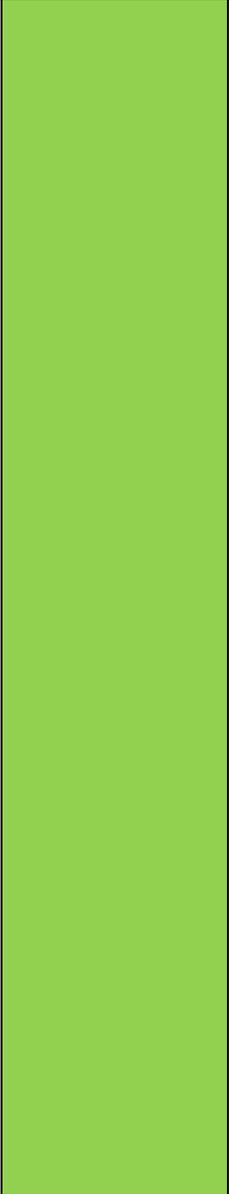

and deletion both during the contract and at contract end?		and will delete as reasonably practical to do so.
Q 5.11 – Does your service ensure that you use a secure deletion and erasure process which encompasses all copies of client/customer data?		Yes our deletion and erasure process is secure and encompasses all copies of client/customer data.
Q 5.12 – Does your service provide a mechanism free of charge whereby users can access a complete and secure copy of their data?		Currently there is no mechanism within Life to allow a school to extract a complete copy of all data at once, but administrators have access to all data and can download/export most data to spreadsheet/zip format.

6. Supplier Response - Data Integrity

Data integrity has been defined as “the property that data is authentic and has not been maliciously or accidentally altered during processing, storage or transmission”. To assist schools in understanding if the cloud service being provided by UniServity is likely to comply with the DPA in relation to data integrity UniServity has confirmed the position to be as follows:

Question	Supplier Response Code	Response Statement with Supporting Evidence (where applicable)
Q 6.1 – Do you allow a trusted independent third party to conduct regular detailed security audits of the physical, technical and organisational aspects of your service?		<p>Yes, we follow a number of best practice procedures across the organisation including:</p> <ul style="list-style-type: none"> - Operating a range of guidelines, policies and procedures regarding Information Security Management Systems that have been approved to ISO 27001 standard. - Following ITIL v3 practices for the Continual Service Improvement of our products and services. We have a detailed Release Management Process which defines all of the stages of our on-going product development, which includes both the software service and associated customer service and support. - All product management we undertake follows Prince 2 methodology.
Q 6.2 – Where the above audits are conducted, do you make the findings available to current and/or prospective cloud customers?		<p>Yes we make findings available on request and also make specific audits on request for large customer organisations.</p>

Q 6.3 – Does your service ensure that where such audits are carried out, they are conducted to best industry standards?		Yes
Q 6.4 – Are audit trails in place enabling users to monitor who is accessing their data?		Yes, our products include auditing and reporting functionality allowing users to audit their own data.
Q 6.5 – Does your service ensure you could restore all customer data (without alteration) from a back-up if you suffered any data loss?		Yes, UniServity carries out regular backups of our services to ensure all customer data can be restored if required.
Q 6.6 – Does your service have a disaster recovery plan, and is information on this plan made available to current/prospective cloud service customers?		<p>All backup processes are managed by our managed service data centre partner.</p> <ul style="list-style-type: none"> • All back-ups are held off-site and are electronic; no data is handled by human hands. • All content data is backed up to another server continuously

- 
- The replicated target is then backed up to another server incrementally during the week, with a full back up over the weekend in the other data centre
 - Backup method is disk to disk, with all disks having a RAID configuration
 - The areas of the learning platform backed up cover all variable data including databases and user uploaded files in the file system
 - All databases held within the learning platform are included within the backed up set
 - There are no restrictions on the size of the backup
 - The learning platform is always live therefore there is no unavailability during backups
 - We store multiple generations of backups however only the most recent is used for a full system restore in order to minimise data loss given a worst-case scenario.
 - All data is backed up to SAN for fast-disaster recovery. The data is held in multiple geographic locations to ensure maximum resilience

We set up appropriate disaster recovery processes for each deployment, which cover all aspects of software,

hardware and infrastructure failure.

This process is available to all large customer contracts as standard, and can be made available to individual schools on request.

7. Supplier Response - Service Availability

Service availability means ensuring timely and reliable access to personal data. One threat to availability in the cloud which is often outside the responsibility of the cloud service provider is the accidental loss of network connectivity between the client and the provider of service.

Data controllers should therefore check whether the cloud provider has adopted reasonable measures to cope with the risk of disruptions, such as backup internet network links, redundant storage and effective data backup mechanisms.

To assist schools in understanding if the service being provided by a particular company is likely to comply with the DPA in relation to service availability UniServy has confirmed as follows:

Question	Supplier Response Code	Response Statement with Supporting Evidence (where applicable)
Q 7.1 – Can you confirm that you have sufficient capacity to ensure you can		The application and network architecture run by UniServy is designed for maximum reliability and

provide a resilient, reliable and accessible service at all times?		uptime. Our systems include robust failover mechanisms to withstand any disruption. Data is replicated multiple times across our services so in the case of a machine failure, data is still accessible through another system.
Q 7.2 – Does your service offer guaranteed service levels?		Yes, as part of our standard contract we guarantee access to the Product shall be at a level of 99.5%.
Q 7.3 – Does your service provide remedies to customers in the event that service levels are not met?		Yes, as part of our standard contract, if we fail to meet our service level obligations, customers are entitled to receive service credits.

8. Supplier Response - Transfers beyond the European Economic Area (EEA)

The eighth principal of the DPA permits the transfer of personal data beyond the EEA when adequate arrangements are in place to ensure rights and freedoms of data subjects in relation to the processing of personal data. The eighth principal of the DPA states:

“Personal data shall not be transferred to any country or territory outside the European Economic Area (EEA) unless that country or territory ensures an adequate level of protection for the rights and freedoms of data subjects in relation to the processing of personal data”

Guidance on data transfers published by the ICO states:

“Cloud customers should ask a potential cloud provider for a list of countries where data is likely to be processed and for information relating to the safeguards in place there. The cloud provider should be able to explain when data will be transferred to these locations.”

The European Commission has approved four sets of standard contractual clauses (known as model clauses) as providing an adequate level of protection where data is transferred outside the EEA. If your service provider uses these model clauses in their entirety in their contract, you will not have to make your own assessment of adequacy.

To assist schools in understanding where its data is likely to be held and if the cloud service being provided is likely to comply with the DPA in relation to permitted transfers of personal data beyond the EEA, UniServity has responded as follows:

Question	Supplier Response Code	Response Statement with Supporting Evidence (where applicable)
Q 8.1 – In providing the service do you limit the transfer of personal data to countries within the EEA?		Yes, our hosting services for our UK customers are UK based and therefore no data leaves the EEA.
Q 8.2 – If you transfer data outside the EEA do you explain to schools when (and under what circumstances) data will be		n/a

transferred to these locations?		
Q 8.3 – If you transfer data outside the EEA does your standard contract include the unmodified EU approved “model clauses” in respect of such transfers?		n/a
Q 8.4 – If you transfer data outside the EEA, (and do not offer the unmodified EU approved "model clauses", can you confirm that the requirements of the DPA are met in respect of the need for adequate protection for the rights and freedoms of data subjects in connection with the cross-border transfer and processing of their personal data?		n/a

9. Supplier Response - Use of Advertising

Recognising the particularly sensitive nature of the data likely to be processed in a cloud service aimed at schools, there is particular concern in relation to the use of advertising and the extent of data mining which providers of cloud-based services may adopt in relation to user data.

To assist schools in understanding if the cloud service provided by a particular company will involve serving advertisements or engaging in advertisement-related data mining or advertisement-related profiling activities, suppliers will be asked to indicate in respect of services to **pupil and staff users** as follows:

ICO cloud computing guidance states that “In order to target advertisements the cloud provider will need access to the personal data of cloud users. A cloud provider may not process the personal data it processes for its own advertising purposes unless this has been authorised by the cloud customer and the cloud customer has explained this processing to cloud users. Individuals have a right to prevent their personal data being used for the purpose of direct marketing”.

So a school would have to agree to the advertising and then would have a duty to explain to staff and pupils what personal data would be collected, how it will be used and by whom, and what control they have over the use of their data in this way.

As there are obvious difficulties with schools deciding if children are competent enough to understand any explanation of their data being used for advertising, and to understand and exercise their right to object, without parental involvement it would seem sensible to avoid this in solutions for schools, especially where children are concerned.

Question	Supplier Response Code	Response Statement with Supporting Evidence (where applicable)
Q 9.1 – In providing the cloud service, is the default position that you enter into a		Yes.

legally binding obligation not to serve advertisements to any pupil or staff users via your school cloud service?		
Q 9.2 – In providing the cloud service, is the default position that you enter into a legally binding obligation not to conduct any advertisement-related data mining in respect of pupil or staff data or metadata?		Yes
Q 9.3 – In providing the cloud service, is the default position that you enter into a legally binding obligation never to use for any commercial purpose (or pass on to others) personal data or metadata in respect of pupil or staff users of your service?		Yes.

Appendix 1: Availability and extent of support available to schools when using cloud software services.

Table of Contents

Section 1.0.....	Introduction
Section 2.0	Managing Worst Case Scenarios
Section 3.0.....	Key Support Areas
Section 3.1.....	Addressing Serious Incidents
Section 3.2.....	Supplier Responsibilities
Section 3.3.....	Solution Configuration
Section 3.4.....	Restoring Data
Section 3.5.....	Managing Media Attention
Section 3.6.....	Engaging with Child Support Agencies
Section 3.7.....	Engaging with the Wider School Community

Section 1.0 Introduction

The Department for Education intends that schools who are considering the use of cloud based services should have easy access to information in relation to:

- Responsibilities in respect of Data Protection Act compliance. General guidance for schools can be found at http://ico.org.uk/for_organisations/sector_guides/education
- The general levels of security inherent in the solutions offered by many of cloud service providers as compared to what might apply to their current arrangements – this information is provided in the general guidance statements to be found at [\(hyperlink tba.gov\)](#)
- The data protection implications of using a particular supplier's cloud services – addressed through the self-certification process detailed in the associated checklist document found above
- The normal support mechanisms available in respect of routine administrative or technical support issues – this is addressed by inviting cloud service providers who are participating in the self-certification process to complete the statements summarising their routine support arrangements as above.
- **The additional support** that would be available in the unlikely event of some **serious data-related incident** related to the use by schools of cloud services – this is addressed by inviting cloud service suppliers to indicate how they would respond to a number of specific challenges which a school might face in the event of such a serious breach or failure.

Section 2.0 of this document sets out the rationale underpinning the need for greater clarity in the event of some serious data-related event.

Section 3.0 sets out those areas where specific supplier commitments on additional support are invited.

Section 2.0 Managing Worst Case Scenarios

Whilst there is much to be gained from adopting a cloud service platform, it is only prudent that schools should, as part of their overall risk assessment, and prior to deploying a cloud service, understand (in the event of a data-protection related “worst case scenario”) the nature and extent of the support that would be forthcoming from a potential cloud service provider.

It is also clearly in the interests of cloud service providers themselves to work with schools to address the technical, business, reputational and legal issues which would flow from some such incident, and which resulted in for example:

- A significant data loss flowing from a breach of security associated with the provision of cloud service
- A breach of privacy whereby confidential data was released to a person or persons not authorised to receive it
- A serious disruption to the school’s business, educational or administrative processes

The key headings that cloud service providers are invited to respond against are set out in **Section 3**. When responding to the various issues set out in Section 3, cloud service providers should draft their response assuming that the intended audience is non-technical senior staff in schools.

Suppliers may, of course, make reference to supporting management or technical documents but the response provided here should go beyond referring to “terms of service” and should set out clearly and simply what additional support could be expected in the event of a data protection-related “worst case scenario”.

Section 3.0 Key Support Areas

The key areas that cloud service providers are invited to respond against in respect of a serious incident are:

- Solution configuration
- Communicating serious breaches
- Supplier responsibilities
- Restoring data
- Managing media attention
- Engaging with the child protection agencies
- Engaging with the wider school community

These are minimum suggested areas and suppliers are free to set out additional support capabilities which could be used in the event of a serious incident and which they feel will engender confidence in schools and differentiate the supplier in this competitive and growing marketplace.

3.1 ADDRESSING SERIOUS INCIDENTS

Cloud service providers should as a minimum clarify in this area of their response:

- How schools should log any serious issues regarding the use of the service, providing as a minimum a UK phone number and support email address. It is better to provide an indication of the individuals or roles that should be the first point of contact – for example “you should also contact our Head of Security J.Smyth@company.com phone number +44 (0) 12345678 who will also make sure our education /public sector team at [xxx] is contacted”. It would also be useful to cover all time scenarios – out of hours, weekends etc.
- The nature of the support that might be available – for example, is it limited to phone and/or email or are there circumstances when on-site support might be required.
- How the cloud service provider might work with schools to address the consequences of the serious incident
- Whether in addition to contacting the incident support centre there are other resources that could be made available – for example via online tools and resources, a partner ecosystem, a local public sector or education support team or identified escalation routes within the company that should be utilised.

Supplier response:

Customers should log all incidents via our UK based support team:

support@uniservity.com

0330 1005135 (available weekdays 8.30am – 5.30pm)

Any issues of a serious nature should also be copied to our Chief Operating Officer

(COO) Colin Green (colin.green@uniservity.com).

On-site support is available if required.

Any serious incidents reported are immediately escalated to our COO and both the support team and COO will work with the school to diagnose and resolve any issues within our control and provide additional advice and support where possible.

We also offer online documentation via our Life Support site, which schools may wish to use to self-diagnose issues.

3.2 SUPPLIER RESPONSIBILITIES

In this section cloud service providers should, as a minimum, set out (in language aimed at school managers), their responsibilities when working with schools to address the implications of a serious incident.

In addition, cloud service providers should describe what practical assistance they would be able to offer which *goes beyond* the “contractual minimum” as set out in their terms and conditions.

Supplier response:

UniServity is committed to providing a high level of service to its customers. Any serious incidents reports are immediately escalated to our Chief Operating Officer (COO) and both our support team and COO will work with the school to take the appropriate action to address the implications of the incident.

As well as online support documentation, we are also happy to provide additional training as required to support schools in their use of the system following any serious incident.

3.3 SOLUTION CONFIGURATION.

Whilst virtually all cloud service providers have detailed technical advice on how their systems should be configured, this section of the supplier response should set out the general principles which school management should expect to see implemented to ensure maximum security of their cloud implementation.

This might cover for example:

- The need for correct configuration of access devices
- The use of additional backup / data synchronisation arrangements for sensitive or business critical data

- Configuration options or additional services that provide greater level of security than is available in your free offering
- Sample password policies in relation to the age and ability of the users of their service
- Policies in respect of helpdesk and security staff access to client data

Supplier response:

UniServity provide pre-requisite documentation to all customers advising the best configuration for machines and browsers in order to access our services.

UniServity also have a data security policy, available to all customers on request. This outlines our policies in relation to staff access, authentication, electronic security policy and data protection policy.

3.4 RESTORING DATA

Where a serious event had occurred which resulted in the loss of data by a school, cloud service, providers should set out what steps they would take to work with the school to recover and restore to the maximum extent possible the data which has been lost (or corrupted). This section should also include indicative timescales.

Supplier response:

Administrators are able to restore resources and files that have been deleted, from the recycle bin which is available as standard within our product.

It is not possible for a user to permanently delete data from the system therefore there is no need for individual schools to be required to restore data.

Should there be an issue with loss of data or corruption of data, our resilient backup strategy ensures we are able to fully recover any affected data. All data is backed up to SAN for fast-disaster recovery. The data is held in multiple geographic locations to ensure maximum resilience.

The target time scale for restoring data is within 5 working days of becoming aware of the issue.

3.5 MANAGING MEDIA ATTENTION

Where a serious event had occurred which resulted in significant media attention falling on the school, suppliers should indicate the steps they would take as a responsible service provider to work with the school in managing the media attention.

Supplier response:

Any serious incidents reports are immediately escalated to our Chief Operating Officer (COO) who would work with the school to agree a communication plan for managing any media attention.

3.6 ENGAGING WITH CHILD SUPPORT AGENCIES

Where a serious event had resulted in issues being raised that related to child protection – for example the loss of sensitive pupil data, the cloud service provider should indicate what it would do to assist the school in engaging with the relevant child protection agencies, over and above the contractual minimum.

Supplier response:

Customers should first contact the UniServity support desk as outlined above to log any incident that may have occurred.

UniServity believe that it is the responsibility of the school to contact any relevant child protection agencies, but will be on hand to offer support and technical advice as required.

3.7 ENGAGING WITH THE WIDER SCHOOL COMMUNITY

Where a serious incident had resulted in issues being raised that related to the wider school community – for example parents, the local authority, the curriculum or examination bodies or the Information Commissioners Office, the cloud service provider should indicate what it would do to assist the school in engaging with the relevant organisation to address the implications of the serious incident. Again, this should describe available support over and above the contractual minimum.

Supplier response:

Customers should first contact the UniServity support desk as outlined above to log any incident that may have occurred.

UniServity believe that it is the responsibility of the school to contact any relevant child protection agencies, but will be on hand to offer support and technical advice as required.
